Cambridge Pathology
Introduction to High-Performance Computing

Dr. Michael A. Boemo

Group Leader
Department of Pathology
University of Cambridge

mb915@cam.ac.uk

14 November, 2022

Outline

We will cover:

1. how to create an account,

2. logging in,

3. types of data storage,

4. types of compute nodes,

5. running jobs,

6. how to check on the status of jobs,

7. how to set up environments.

Account Creation

Link for account creation:
www.hpc.cam.ac.uk/applications-access-research-computing-services

Workflow:

1. Have your PI create an account first (if they haven't already).

2. Students/postdocs/staff apply for their own account.

3. PI gets an Email to approve student/postdoc/staff account creation, linking to lab's account.

4. Set up multifactor authentication.

Resources Available Per Account

Computing Resources Per Lab Account

- 200,000 CPU hours per PI per quarter.
- 3,000 GPU hours per PI per quarter.
- Refreshes on first of: Nov, Feb, May, Aug.

Data Storage Per User Account

1 TB in rds/hpc-work (hot storage; not backed up).
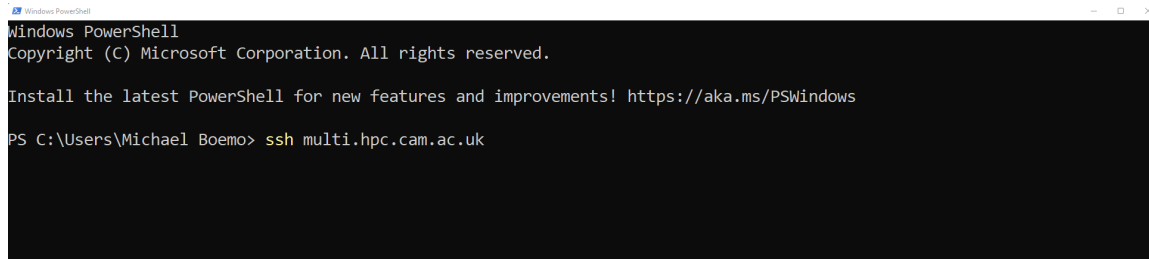

Setting up Multifactor Authentication

Download and install Microsoft Authenticator app on your phone:
https://www.microsoft.com/en-us/security/mobile-authenticator-app
(You probably already have this for Outlook login.)

Open PowerShell (Windows) or a terminal (OSX or Linux).
Type: `ssh multi.hpc.cam.ac.uk`

```
Windows PowerShell
Copyright (C) Microsoft Corporation. All rights reserved.

Install the latest PowerShell for new features and improvements! https://aka.ms/PSWindows

PS C:\Users\Michael Boemo> ssh multi.hpc.cam.ac.uk
```

Setting up Multifactor Authentication

Enter your username and password.
Username: CRSid
Password: Raven password

From phone app: tap "+" in the right corner.
Scan the QR code that appears in the terminal.
Phone app will show a 6-digit TOTP code.
(Code changes every 30 seconds.)
Enter TOTP code in terminal.

Connection should terminate.

Ways to Log In

Command Line

- submit jobs,
- move files around,
- ftp files between servers,
- PowerShell or PuTTY (Windows) or terminal (OSX or Linux).

FTP Client

- move files between your computer and the server,
- graphical user interface,
- FileZilla (Windows, OSX), CyberDuck (Windows, OSX), Nautilus (Ubuntu).

Logging In (Command Line)
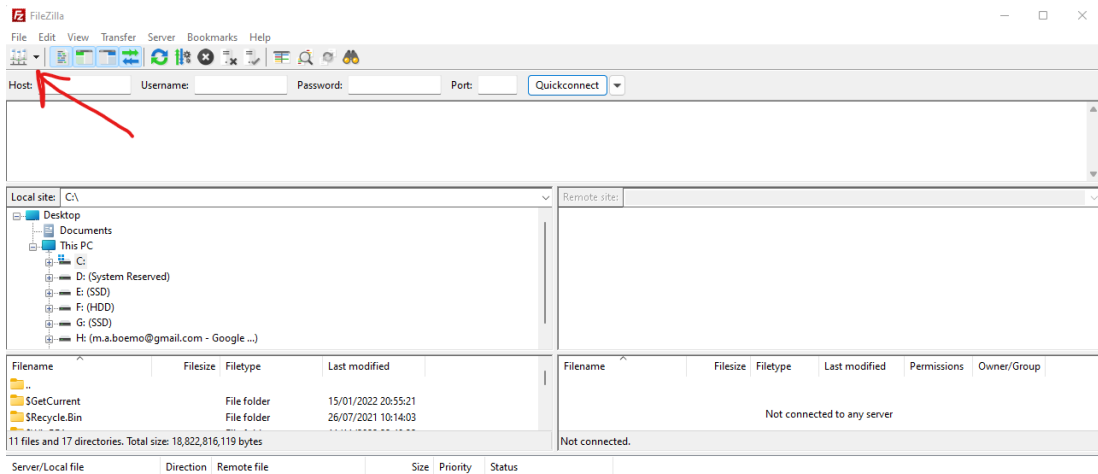

Logging In (Command Line)

```
PS C:\Users\Michael Boemo> ssh mb915@login-cpu.hpc.cam.ac.uk
The authenticity of host 'login-cpu.hpc.cam.ac.uk (128.232.224.46)' can't be established.
ED25519 key fingerprint is SHA256:nFVSXK+VRGCaUupQEdhXzO6kp01m2fzzmbgPr0sc2so.
Are you sure you want to continue connecting (yes/no/[fingerprint])? yes
Warning: Permanently added 'login-cpu.hpc.cam.ac.uk,128.232.224.46' (ED25519) to the list of known hosts.

        <><><><><><><><><><><><><><><><><><><><><><><><><><><>
        <>                                                  <>

Logging In (FTP Client)

Logging In (FTP Client)

Logging In (FTP Client)

Data Services

Research Data Storage (RDS)

- high-performance, hot storage mounted on HPC platforms,
- not redundant,
- £54 per TB per year.

Research Cold Storage (RCS)

- slow, redundant cold storage on two tape libraries,
- £30.72 per TB per year.

Research File Share (RFS)

- not mounted on HPC platforms, but resilient with frequent snapshots for backups,
- £116.10 per TB per year.

Accessing Data Services (Command Line)

Accessing Data Services (FTP Client)

Data Services Working Together

Consider the following lab:

- protocols, spreadsheets, and documents shared and edited between a number of people (Research File Share),

- data and files from lab members that have left (Research Cold Storage),

- backups of all raw sequencing datasets (Research Cold Storage),

- sequencing datasets actively being used for omics analyses (Research Data Storage).

## Backup and Data Handling Practices

- at least one data copy should be completely raw,

- good naming conventions and record keeping for datasets,
  - 2021_08_12_VM_ONT_EdU_HU_BrdU_ULR_fast5

- think through how data is moving and any weak points,

- accidents should never cause permanent damage,

- clear and agreed upon backup strategies.

Backup Strategies

Data Storage

Each member has:

- 1 TB in rds/hpc-work
- 20 TB hot storage partitions (RDS)

CPU Compute Nodes Available

Cascade Lake Nodes

- 56 CPUs (112 threads) per node,
- 192 GB of RAM per node,
- high memory nodes with 384 GB of RAM.

Ice Lake Nodes

- 76 CPUs (152 threads) per node,
- 192 GB of RAM per node,
- high memory nodes with 384 GB of RAM.

GPU Compute Nodes Available

A100 Nodes

- four NVIDIA Amphere A100 80 GB GPUs per node,
- 128 AMD CPUs per node.

At-Once Usage Caps
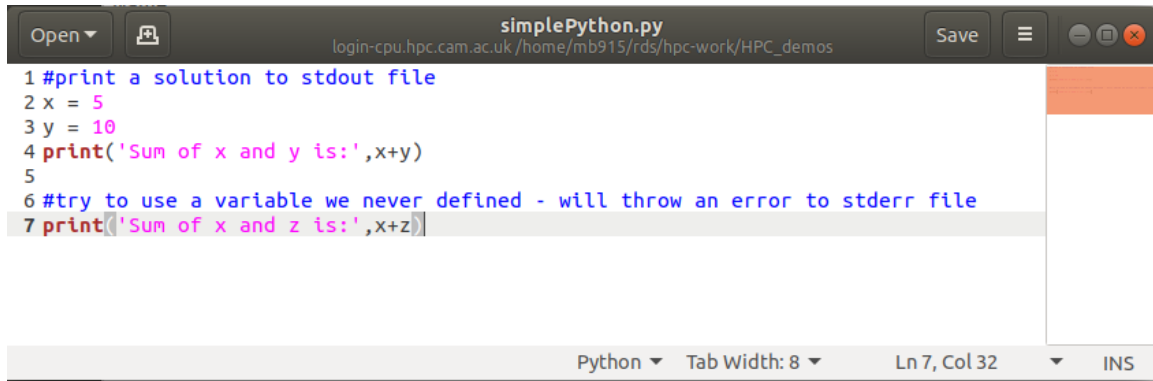

SL3

- 320 CPUs,
- 32 GPUs,
- 12-hour maximum job time.

SL1/2

- 1280 CPUs,
- 64 GPUs,
- 36-hour maximum job time.

Which Login Node to Use?

Create a Simple Python Script

```
1 #print a solution to stdout file
2 x = 5
3 y = 10
4 print('Sum of x and y is:',x+y)
5
6 #try to use a variable we never defined - will throw an error to stderr file
7 print('Sum of x and z is:',x+z)
```

Creating an sbatch Script

```
HPCtraining1.sh
login-gpu.hpc.cam.ac.uk //home/mb915/rds/hpc-work/HPC_demos

 1  #!/bin/bash
 2  #
 3  #SBATCH -p icelake
 4  #SBATCH -A BOEMO-SL3-CPU
 5  #SBATCH --job-name=simplePy
 6  #SBATCH --nodes=1
 7  #SBATCH --ntasks=1
 8  #SBATCH --cpus-per-task=1
 9  #SBATCH --output="/home/mb915/rds/hpc-work/HPC_demos/2021_10_15_simplePython.stdout"
10  #SBATCH --error="/home/mb915/rds/hpc-work/HPC_demos/2021_10_15_simplePython.stderr"
11  #SBATCH --time=0:01:00
12
13  SCRIPT="/home/mb915/rds/hpc-work/HPC_demos/simplePython.py"
14
15  srun python $SCRIPT
```
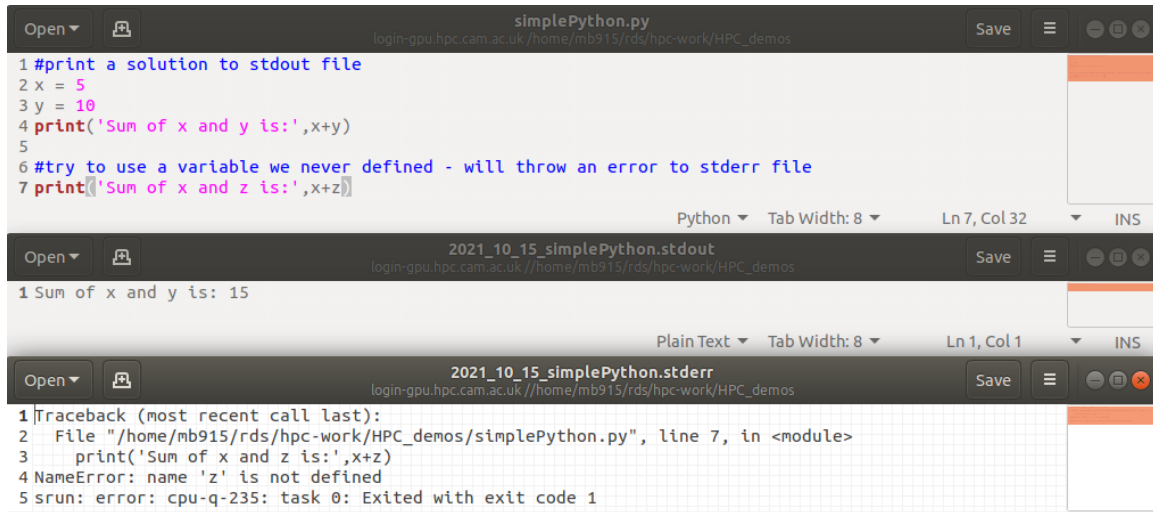

Submitting Jobs to Compute Nodes

```
(base) [mb915@login-e-8 HPC_demos]$ sbatch HPCtraining1.sh
Submitted batch job 47460048
(base) [mb915@login-e-8 HPC_demos]$ squeue -u mb915
          JOBID PARTITION     NAME     USER ST       TIME  NODES NODELIST(REASON)
       47455220    cclake      bcs    mb915 PD       0:00      1 (Priority)
       47455255    cclake      bcs    mb915 PD       0:00      1 (Priority)
       47460048    cclake simplePy    mb915 PD       0:00      1 (Priority)
(base) [mb915@login-e-8 HPC_demos]$
```

Submitting Jobs to Compute Nodes

```
simplePython.py
login-gpu.hpc.cam.ac.uk /home/mb915/rds/hpc-work/HPC_demos

1 #print a solution to stdout file
2 x = 5
3 y = 10
4 print('Sum of x and y is:',x+y)
5
6 #try to use a variable we never defined - will throw an error to stderr file
7 print('Sum of x and z is:',x+z)
```

```
2021_10_15_simplePython.stdout
login-gpu.hpc.cam.ac.uk //home/mb915/rds/hpc-work/HPC_demos

1 Sum of x and y is: 15
```

```
2021_10_15_simplePython.stderr
login-gpu.hpc.cam.ac.uk //home/mb915/rds/hpc-work/HPC_demos

1 Traceback (most recent call last):
2   File "/home/mb915/rds/hpc-work/HPC_demos/simplePython.py", line 7, in <module>
3     print('Sum of x and z is:',x+z)

15  GENOME="/home/mb915/rds/hpc-work/reference.fasta"
16  QUERY="/home/mb915/rds/hpc-work/HPC_demos/reads.fastq"
17
18  srun $MINIMAP2 -ax map-ont -t 76 -a -o $OUTSAM $GENOME $QUERY
```

Window title: **minimap2.sh** — login-gpu.hpc.cam.ac.uk //home/mb915/rds/hpc-work/HPC_demos

Job Arrays

We have:

- one Python script that will do some analysis,

- lots of data files (called `input0`, `input1`, ..., `input6`) that we want to run this same script on.

```python
1 import sys
2
3 print('I was passed:',sys.argv[1])
```
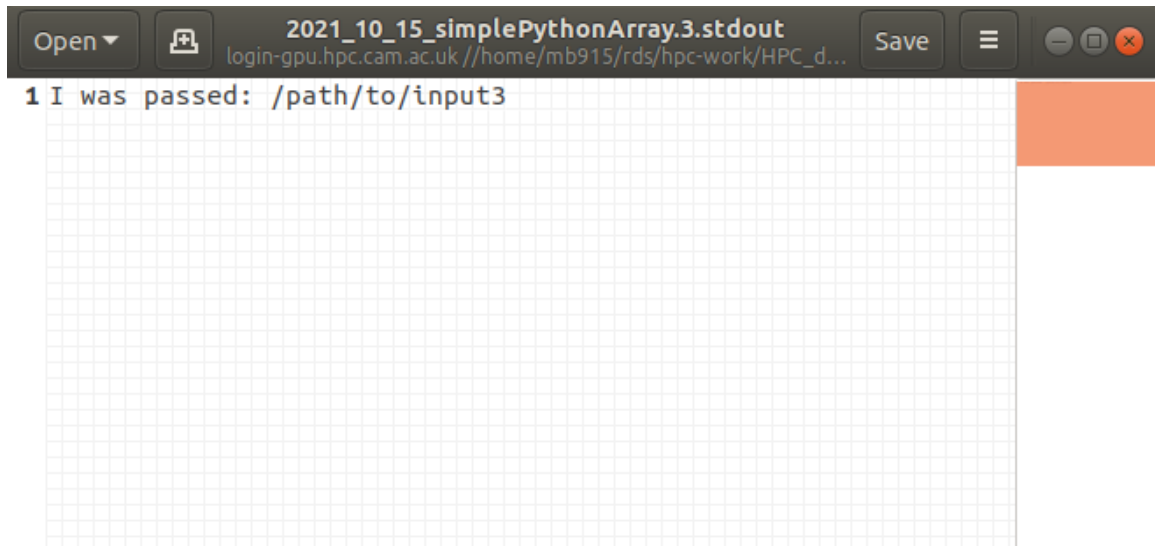

Job Arrays

```
#!/bin/bash
#
#SBATCH -p cclake
#SBATCH -A BOEMO-SL3-CPU
#SBATCH --job-name=simplePyArr
#SBATCH --nodes=1
#SBATCH --ntasks=1
#SBATCH --cpus-per-task=1
#SBATCH --output="/home/mb915/rds/hpc-work/HPC_demos/2021_10_15_simplePythonArray.%a.stdout"
#SBATCH --error="/home/mb915/rds/hpc-work/HPC_demos/2021_10_15_simplePythonArray.%a.stderr"
#SBATCH --time=0:01:00
#SBATCH --array=0-6

SCRIPT="/home/mb915/rds/hpc-work/HPC_demos/simplePythonArray.py"
INPUTDATA="/path/to/input${SLURM_ARRAY_TASK_ID}"

srun python $SCRIPT $INPUTDATA
```

Job Arrays

Job Arrays

Modules

All modules currently loaded:
```
module list
```

List all modules available to load:
```
module avail
```

Search for an available module (samtools, for example):
```
module avail samtools
```

Virtual Environments

We have:

- at least one Python package we want to install.

We could do:

- `pip3 install --user tensorflow=2.4.1`

Better:

- use virtual environments!

Virtual Environments

Making a new virtual environment:

- `virtualenv HPC_TRAINING`

Activate it:

- `source /path/to/HPC_TRAINING/bin/activate`

Deactivate it:

- `deactivate`

Putting It All Together: Run on GPUs

```bash
 1 #!/bin/bash
 2 #
 3 #SBATCH -p ampere
 4 #SBATCH -A BOEMO-SL3-GPU
 5 #SBATCH --job-name=gpuJob
 6 #SBATCH --gres=gpu:1
 7 #SBATCH --ntasks=1
 8 #SBATCH --nodes=1
 9 #SBATCH --cpus-per-task=3
10 #SBATCH --output="/home/mb915/rds/hpc-work/output/2021_10_15_gpuJob.stdout"
11 #SBATCH --error="/home/mb915/rds/hpc-work/output/2021_10_15_gpuJob.stderr"
12 #SBATCH --time=4:00:00
13
14 module purge
15 module load rhel7/default-gpu
16 module unload cuda/8.0
17 module load cuda/11.0 cuda/11.1 cudnn/8.0_cuda-11.1
18
19 source /home/mb915/rds/hpc-work/tensorflow-env/bin/activate
20
21 SCRIPT="/home/mb915/rds/hpc-work/trainLargeDNN.py"
22
23 srun python $SCRIPT
```

Seeing Past Jobs and Statuses
